"FOAM"

Copyright 2011, Detrick Lawrence

About foam

Water has traditionally been used to fight fires because it is readily available and has great heat-absorbing capability. However, Class B fires, fires which involve flammable or combustible liquids, cannot be extinguished by water alone. Fire protection professionals have developed firefighting foams for use on Class A and Class B fires and certain hazardous materials spills.

Foam can be used to extinguish fire, prevent ignition at flammable or combustible liquid spills, control vapors at hazardous materials spills, and fight some fires. To be effective, it is important that foam be prepared and applied correctly.

About the program

"Foam" is designed to teach emergency responders what they need to know in order to select, prepare, and apply foam to Class A or B fires or hazardous materials spills. This program objectively studies all of the basic foam concentrates currently on the market, including Fluoroprotein (FP), AFFF, AR-AFFF, FFFP, high expansion, and Class A foams, and discusses the special properties and drawbacks of each. The program emphasizes the value of pre-incident planning, tells how to analyze a site to determine what type and quantity of foam concentrates to keep available, discusses foam compatibility, and covers

other factors to be considered in planning an emergency response. Updated information on ethanol fires and the effects of polar solvents on foam is included.

Specific information is provided on preparing and delivering foam. Nozzles, hoselines, foam vehicles and other equipment used in foam preparation and delivery are examined.

About the technical committee

Emergency Film Group programs are created with the assistance of leaders in emergency response training as well as the subject matter. Technical committee members for "Foam" include the following authorities:

Mike Hildebrand Senior partner and hazardous materials consultant with Hildebrand & Noll Associates and former Director of Safety and Fire Protection for the American Petroleum Institute. He co-authored the widely-circulated text *Hazardous Materials: Managing the Incident*.

Greg Noll Senior partner and hazardous materials consultant with Hildebrand & Noll Associates and former HazMat Coordinator with the Prince George's Cty, MD Fire Dept. He has over 30 years experience in emergency response.

Brett Keith - Product Manager, Tyco Fire Protection Products.

Craig Shelley, Consultant, Williams Fire & Hazard Control. Chief Shelley recently left his role as a technical advisor for the Saudi Aramco Fire Protection Department and now provides consulting and training services to fire, emergency

management and safety professionals.

About the filmmakers

Gordon Massingham, Director. For over 25 years one of the world's leading creators of emergency response training. Winner of more than 130 national and international awards.

Michael Cataldo, Writer, producer, and director. Michael also serves as assistant director, set designer, and prop and special effects creator. He holds a Bos-ton/New England Emmy Awards Honor for Art Direction by the National Academy of Television Arts & Science.

About the Emergency Film Group

Emergency Film Group, a division of the Detrick Lawrence Corp., was established to distribute quality training films for emergency response and right to know education. Firmly committed to accuracy, EFG uses the best qualified advisors and production crews to ensure that programs are not only exciting to watch, but are also accurate in every detail.

EFG's worldwide list of customers range from the largest petrochemical companies, to government agencies, to small town fire departments. Every film comes with EFG's 30-day money-back guarantee if the customer is not satisfied.
